

PLANET DAY

22nd April is a day to celebrate OUR PLANET and to point out the problems, to suggest some of the things in order to give our contribution to SAVE OUR PLANET.

There are many problems which make our lives difficult – noise, pollution, global warming... If we do not do some clever things together our planet Earth will disappear, and we are in danger as well as the animals and trees. The environment suffers and it is high time to do something, to look after it. We are responsible for the future.

What do you suggest?

What is ecology?

What is pollution?

Watch these videos and **make a LOGO** for this day. You can draw and colour something, you can write lyrics, you can sing, just be creative.
